

Will Broadband Internet Service Meet Your Needs?

If you've ever waited for dial-up to connect you and then tried to download a graphics-rich webpage, the need for broadband access becomes immediately clear. However, even with that said, in many cases, people will resist leaving dial-up because of cost concerns, thoughts that going to high-speed will be too much of a hassle and too complex, and a myriad of other myths about getting robbed through the Internet.

While a few people voice concern about transitioning from old school internet surfing to the new and faster way, once they experience the difference, there is no turning back. Individuals who rarely visited websites before are now quickly becoming internet junkies. As the net expands to include online video and audio, you definitely don't want to be left in the cyber dust.

Okay, so you realize that surfing the web with dial-up is no longer an option, and you know that you will have a much more rewarding experience with a high speed internet connection. However, the challenge to you moving forward may be the confusion of exactly who to choose for your service. Let's face it, companies like Comcast are advertising daily for you to try their Comcast Specials on radio, television and of course online. So, who do you believe?

While wireless speeds are increasing, if security is your top priority or major paranoia, then stick with cable connections. In either case, surfing the web at high-speeds will rapidly become your thing to do. It will allow you to watch movies, watch newscasts, catch up on the weather, keep in touch with relatives remotely and live through streaming videos and webcams and a myriad of other tasks that dialup access is simply too slow to handle.

Do you bank or pay your bills online? If so, then you will certainly appreciate the enhanced security features that a broadband connection provides. Whether you surf the net with a cable connection or wirelessly, you can rest assured that your data is safe.

When it comes to safety and identity theft, all of the major broadband users are implementing a number of scanning services, adware blockers and spam killers to allow people to surf in peace without the worry of getting hacked. Comcast is one of the premiere services, and its wireless services come with the modem set to the newer WPA encryption and not the WEP encryption that was cracked about five years ago.

Want another security layer between you and the bad guys out there online? If so, then DSL access may be what you are looking for. DSL services are provided through existing telephone lines and have been found to be very effective in firewall protecting your connection.

Since its inception, wireless connections have become more and more secure however for the ultimate mark of a truly secure connection, a cable hook up appears to be the best. The best part about upgrading your internet is that you are literally just one click away from an online experience you will never forge.
